

How To *Increase Security*

With data loss hitting the headlines constantly it's vital that companies invest in keeping their client data secure. A quick guide to security covers a range of hardware and software security measures.

1. Lock Down

Physical security products such as cable locks, portable safes, and laptop lockers enable you to keep all IT products (and other valuables) safe at-tempted thefts. Physical security also acts as a strong visual deterrent to thieves.

Physical security including notebook cables

2. Encryption

Much data is lost or stolen in transit - on laptops, USB drives, or CDs. A range of encryption products is available from Hypertec for a variety of uses. DataSafe USB Flash Drives and Firestorm external hard disk drives encrypt all data within, using 256bit AES encryption (the strongest available). Firestorm Optical drives are able to encrypt data before burning it to disk for storage or transport. Also available is DiskProtect hard drive encryption software to ensure data is safe on laptops and desktops.

Software security including encryption products

3. Drive Sanitisation

Hyperdrive USB Flash Drives and Firestorm External HDDs come with disk sanitisation software to enable users to entirely erase data from memory when required - normal deleting leaves a trace of the data on the drive which can be recovered.

4. Block Access

Hypertec supply ConnectProtect - a software program which gives companies the ability to block unauthorised USB products from their systems - including those of mobile workers. We can combine our products so that only the drives bought from a pre-authorized source will work on your system, thereby preventing any unauthorised up or downloading of information. ConnectProtect also logs any unsuccessful attempts at illegal access.

DataSafe Drives with encryption & disk sanitisation

Hypertec's sales and product management team is always available to give you advice on security, simply contact us as below.

Hypertec products are chosen to be simple to use, and of a high quality which should give you no trouble. However if you need advice, assistance, or experience problems, simply contact the Hypertec Technical Support team on 0870 243 5603, between 8.30am - 6pm, Monday-Friday.
