## What is Bioplastic?

For several years, Accuratus has worked to create a fully biodegradable bioplastic. After extensive research and testing we are proud to reveal the CA-BI002-2023Rev2 Bioplastic, made using wheatgrass and formed from a natural polymer called lignin, which is found in straw. The straw is broken down by bacteria and then mixed with natural sugars, becoming a workable material with similar properties to plastic – without the use of any artificial chemicals or fossil fuels. The result is a range of stylish, high-quality products, with all the quality of life features you've come to expect from Accuratus.
