

SFP-10GB-DW-C-S5-I-CN2-AO

Ciena® Compatible TAA 10GBase-DWDM SFP+ Transceiver (Smart-Tunable, 80km, LC, DOM, -40 to 85C)

Features

- SFF-8432 and SFF-8472 Compliance
- Smart-Tunable
- Duplex LC Connector
- Single-mode Fiber
- Hot Pluggable
- Operating Temperature -40 to 85 Celsius
- Metal with Lower EMI
- Excellent ESD Protection
- RoHS Compliant and Lead-free

Applications

- 8x/10x Fibre Channel
- 10x Gigabit Ethernet over DWDM
- Access, Metro and Enterprise

Product Description

This Ciena® SFP+ transceiver provides 10GBase-DWDM throughput up to 80km over single-mode fiber (SMF) using a wavelength of Smart-Tunable via an LC connector. It is guaranteed to be 100% compatible with the equivalent Ciena® transceiver. This easy to install, hot swappable transceiver has been programmed, uniquely serialized and data-traffic and application tested to ensure that it will initialize and perform identically. Digital optical monitoring (DOM) support is also present to allow access to real-time operating parameters. This transceiver is Trade Agreements Act (TAA) compliant. We stand behind the quality of our products and proudly offer a limited lifetime warranty.

AddOn's transceivers are RoHS compliant and lead-free.

TAA refers to the Trade Agreements Act (19 U.S.C. & 2501-2581), which is intended to foster fair and open international trade. TAA requires that the U.S. Government may acquire only "U.S. – made or designated country end products."

- Rpullup (Rp) is the pull up resistor. Active bus termination may be used by the host in place of a pullup resistor. Pull ups can be connected to multiple power supplies, however the host board design shall ensure that no module pin has voltage exceeding module. Measured at the Host side of the connector. VccT/R + 0.5 V nor requires the module to sink more than 3.0mA current

- 3. C_i is the capacitance looking into the module SCL and SDA pins.
- 4. C_b is the total bus capacitance on the SCL or SDA bus.

SFP+ Timing Diagram

Physical Interface

SFP+ Timing Requirements

Parameter	Symbol	Min	Max	Unit	Conditions
Tx_Disable assert time	t_off		100	μs	Rising edge of TX_Disable to fall of output signal below 10% of nominal.
TX_Disable negate time	T_on		2	ms	Falling edge of TX Disable to rise output signal above 90% of nominal. This only applies in normal operation, not during start up or fault recovery.
Time to initialize 2-wire interface	t_2w_start_up		300	ms	From power on or hot plug after the supply meeting
Time to initialize cooled module and time to power up a cooled module to Power Level II	t_start_up_cooled		90	sec	From power supplies meeting or hot plug, or Tx disable negated during power up or Tx_Fault recovery, until cooled power level II part during fault recovery is fully operational. Also, from stop bit-low-to-high SDA transition enabling Power Level II until cooled module is fully operational.
Tx_Fault assert for cooled module	Tx_fault_on_cooled		1	ms	From occurrence of fault to assertion of TX_Fault
Tx_Fault Reset	t_reset	10		μs	Time TX_disable must be held high to reset TX_Fault
RX_LOS assert delay	t_los_on		100	μs	From occurrence of loss of signal to assertion of RX_LOS
Rx_LOS negate delay	t_los_off		100	μs	From occurrence of presence of signal to negation of RX_LOS.
Maximum Current Ramp on Power Supply					
Icc instantaneous peak current			800	mA	Note 1,2
Icc sustained peak current			660	mA	Note 1,2

Notes:

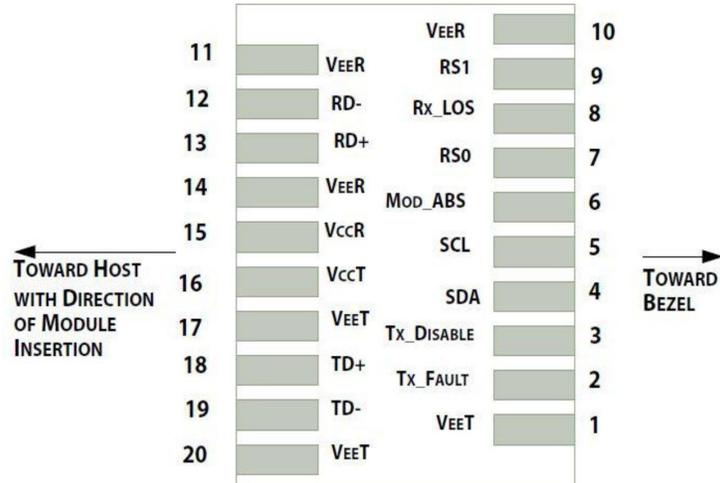

1. The maximum currents are the allowed currents for each power supply VccT or VccR, therefore the total module peak currents can be twice this value. The instantaneous peak current is allowed to exceed to specified maximum current capacity of the connector contact for a short period.
2. Not to exceed the sustained peak limit for the more than 50 μs; may exceed this limit for shorter durations.

19	CML-I	TD-	3	Transmitter Inverted Data Output(SFI).	
20		VeeT	1	Module Transmitter Ground.	1

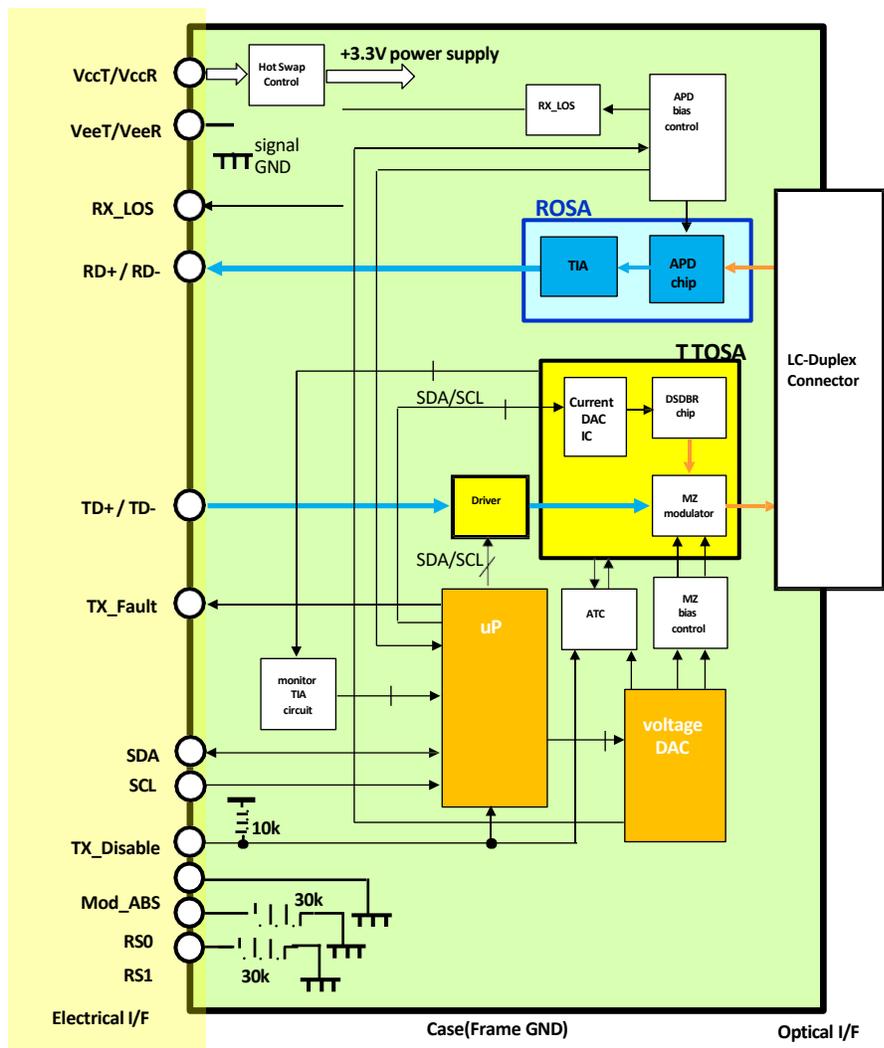

Notes:

1. The module signal ground pins, VeeR and VeeT, are isolated from the module case.
2. This pin is an open drain output pin and shall be pulled up with a 4.7k-10kΩ to Host_Vcc on the host board. Pull ups can be connected to multiple power supplies, however the host board design shall ensure that no module pin has voltage exceeding module VccT/R + 0.5V.
3. This pin is an input pin with 10kohms pull up to VccT in the module.
4. This pin shall be pulled up with 4.7k-10kohms to Host_Vcc on the host board.
5. VccT and VccR are tied together inside the module.

About AddOn Networks

In 1999, AddOn Networks entered the market with a single product. Our founders fulfilled a severe shortage for compatible, cost-effective optical transceivers that compete at the same performance levels as leading OEM manufacturers. Adhering to the idea of redefining service and product quality not previously had in the fiber optic networking industry, AddOn invested resources in solution design, production, fulfillment, and global support.

Combining one of the most extensive and stringent testing processes in the industry, an exceptional free tech support center, and a consistent roll-out of innovative technologies, AddOn has continually set industry standards of quality and reliability throughout its history.

Reliability is the cornerstone of any optical fiber network and is engrained in AddOn's DNA. It has played a key role in nurturing the long-term relationships developed over the years with customers. AddOn remains committed to exceeding industry standards with certifications from ranging from NEBS Level 3 to ISO 9001:2005 with every new development while maintaining the signature reliability of its products.
