Sustainability Report

Company introduction

Contour Design

Reduce pain, avoid strain and work faster with an ergonomic mouse

Sustainability statement

Contour Designs' mission is to offer the most innovative products and high-quality services, enabling better job satisfaction, ergonomics, and productivity. Our unique product offering contributes to positive impacts for our customers, while we recognize the need to manage all sustainability risks and negative impacts of our business. At Contour Design, we are committed to contribute to a sustainable development and our ambition for the coming years is to be in the forefront of the sustainability agenda in our industry. In line with this ambition, we want to be proactive in addressing sustainability trends and topics of interest to our customers and other stakeholders and go beyond compliance. This also means that we set a high ambition for responsible business conduct in all areas, both internally and with business relationships.

For Contour Design sustainability is about:

- Developing high quality products that will have a long lifetime and provide our customers with the right working equipment to ensure a healthy work life.
- Minimize the environmental impact of our products by working with product design, material selection and our supply chain. Hereunder reducing and replacing virgin and high-emission materials and improving circularity and the end-of-use impact of our products. A focus area for us is to minimize our CO2e emissions and we take a fact-based approach to our efforts to make sure that the initiatives we launch will make a real impact and address the largest categories of our CO2e baseline. We will also work to create transparency for our customers and enable end-consumers to make informed choices.
- Ensuring our products are produced in a responsible way by building best practice in managing adverse impacts, in particular on the right to healthy and safe working conditions, throughout our supply chain, in cooperation with our suppliers and other business relationships.

At Contour Design, we apply internationally agreed principles to define sustainable development: human rights (including labor rights), environmental, and economic sustainability. As a member of UN Global Compact, we embrace their 10 principles, which we make operational through the UN Guiding Principles (UNGPs) and the OECD Guidelines for Multinational Enterprises (OECD).

We do this by:

- Adopting a sustainability Policy Commitment, vetted by external experts
- Establishing and maintaining a Due Diligence Process, aligned with UNGP/OECD guidelines
- Provide access to remedy through grievance mechanisms/ whistleblower system

Management summary

"In 2021 we also invested considerable resources in establishing a baseline for our CO2e footprint. It comes as no surprise that most of our emissions comes from materials used in production."

During 2021 Contour Design has taken a big leap towards a more structured approach to our sustainability work. We have developed and implemented a management system covering all three areas of sustainability: human rights (including labor rights), environment and economy. Our work has been aligned with internationally agreed principles and vetted by experts. In 2021, Contour Design appointed a full-time Head of Sustainability.

Triple bottom line

Aligning our work with the UN Guiding Principles (UNGP) and OECD Guidelines for Multinational Enterprises, we have implemented what is referred to as the *global minimum standard* for responsible business conduct. In essence, it is a universally agreed standard, covering 48 human rights, 20 environmental and 16 areas of anti-corruption. This has enabled Contour Design to identify potential adverse impacts on the triple bottom line, and we performed our first impact assessment in 2021 for our head-office in Denmark. Next assessment is planned for our factory in China during 2022. This is to ensure we are doing all we can to reduce risk and avoid or mitigate any negative impacts from our business, followed by concrete initiatives and action-plans to prevent such impacts. In short, try to avoid being taken by surprise. Furthermore, and as required by the standard, we will communicate any severe negative impacts to our business relationships and expect the same in return from them. No severe negative impacts were identified during our first impact assessment. A Code of Conduct for Business Relationships has been developed and will be communicated to our suppliers and partners. It is worth noting, that we are holding ourselves to the same standard as we expect from our relationships. Hence, our impact assessment will serve as documentation on how Contour Design is working with sustainable development and responsible business conduct. We are prepared to share this documentation as proof and to inspire dialogue on collective improvement with our partners and suppliers. If something should still go wrong, we are in the process of developing a grievance mechanism/ whistleblower system so employees and other stakeholders can tell us about it and we can make it right.

Climate action

In 2021 we also invested considerable resources in establishing a baseline for our CO2e footprint, and we are following up this year by updating the baseline. The CO2e footprint for 2020 and 2021 are both communicated in this report. Collecting and

calculating data on Scope 1, 2 and 3 has supported us in identifying the areas of highest emissions in Contour and our value chain. As a hardware manufacturer of computer accessories, it comes as no surprise that most of our emissions comes from Scope 3, and even more specific from materials used in production. As a result of these findings, concrete initiatives have been put in place to reduce emissions, among other things: increasing use of recycled materials on e.g., aluminum, plastic, and PCBs (printed circuit boards). Other initiatives include implementing sustainability metrics in product design, responsible sourcing and emissions tracking of materials and transport.

UN Global Compact and the SDGs

Contour Design became a member of UN Global Compact during 2021 and are committed to respect the ten principles. Our first Communication on Progress (COP) is due in May 2022, and we have opted to take part in their Early Adopter Program which aims to test out their advanced Communication of Progress report (CoP) that will be mandatory for all from 2023. We are following up on our commitment by focusing on a selection of the Sustainable Development Goals where we believe we have the most impact.

We are looking forward to continuing the journey in the coming years, embedding a sustainability mindset both internally across our organization and externally in partnership with our business relationships.

With kind regards,

Kenneth Nielsen

Sustainability metrics

Polaris cross-portfolio KPIs

Climate action

Gender equality

Employee turnover

CO2e intensity gram/DKK revenue

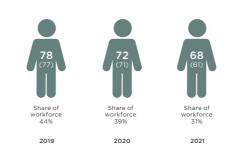

% of women in the company

There was a slight increase in share

Employee-initiated turnover (total attrition) (x) of which related to part-time employees

Absolute CO2e emissions across Scope 1-3 increased with 9% in 2021 mainly driven by increased amount of purchased goods. As our revenue also increased, the Scope 3 CO2e intensity decreased. Scope 3 remain the largest share of our baseline, especially purchased goods and services accounting for 90%. Scope 1-2 CO2e intensity also decreased in 2021 driven by less emissions from electricity and fuel-driven vehicles.

of women between 2020 and 2021 in management and employees. Defining targets on gender equality will support development of initiatives and actions in this area, and further guide our focus in this area moving forward.

Contour's high turnover is mainly attributed to our factory in China and its employees. As workload fluctuates annually, a large share of the workers resign and seek positions in other organizations. This is a common trait for the industry in this region.

SASB: TC-ES-320a.2

Recycled materials

During 2021 we developed our CO2e baseline on Scope 1, 2 and 3, to enable transparent disclosure of our emissions to stakeholders, and identify CO2e reduction opportunities. Emissions from Scope 3. in particular from materials use in production. was identified as the main source of emissions in Contour. Based on this data, we have initiated a process of replacing virgin materials with recycled materials. Examples of materials are aluminum, plastic and PCBs (printed circuit boards). Our work on this is continous, and we aim to be able to report on our progress with certifications and documentation on the use of recycled materials

Material emission

Materials emission is guiding our CO2e reduction efforts. It provides the reasoning behind the need for replacing virgin materials with recycled materials, as recycled materials have a lower emission compared to virgin materials. Hence, by increasing use of recycled materials, we are targeting a large percentage of our overall emissions, and in turn reducing emissions. We intend to continue tracking materials specific emissions, to further support and guide our decisions on materials use in product design and production. Examples of materials where we have concrete initiatives are aluminum, plastic, PCBs (printed circuit boards) and other highemitting metals and materials.

Transport emissions

As our CO2e baseline revealed, emissions from transport plays a role and needs continuous tracking to be kept under control. Mode of transport (flight, sea, road, other) significantly affects our ability to reduce CO2e overall, and we are therefore tracking this specifically and working hard to continue replacing all air-freight with lower emission modes of transport. Correct forecasting and proactive dialogue with suppliers and customers will be vital to aviod "rush-orders" and remove the need for transportation of goods by flight.

Sustainability Report 2021 Sustainability Report 2021

The Sustainable Development Goals

Contour's contribution to the SDGs

For Contour, protecting labor rights and promoting safe and healthy working environments is a key priority. We conduct annual assessments in our Chinese production facilities and monitor and report on our performance. Moreover, we will conduct yearly employee satisfaction surveys for all offices, and already provide our employees with tools and equipment to ensure a healthy working environment.

Contour will work to ensure non-discrimination and genderequality in employment through implementing gender-sensitive recruitment, promotion, and retention practices. To ensure that any potential examples of discrimination are reported and handled appropriately we are putting in place adequate grievance mechanisms as well as a whistleblower system.

Increasing Positive **Impacts**

Minimizing Negative **Impacts**

Contour continuously assess the environmental impacts of purchased materials and components from our suppliers and work to reduce our supply chain emissions. To ensure a responsible supply chain, we have developed a Code of Conduct for Business Relationships that all our suppliers must adhere to and developing a Standard Operating Procedure for Conflict Minerals, relating to responsible sourcing of minerals.

Being a global organization with operations in multiple geographical locations where business practices vary, Contour has implemented anticorruption and anti-bribery as a part of our Code of Conduct. Moreover, we are adopting a global whistleblower system and will provide training to all our employees to identify and act against corruption and bribery in all forms.

Contour discloses CO2e emissions according to the GHG Protocol and work actively to reduce emissions from its own operations (Scope 1 & 2) as well as emissions from upstream and downstream activities (Scope 3)

environmental impacts. Our packaging is 100% plastic free, and we are developing a plan to switch to lower emission materials across the production, and have e.g., set targets for reducing the CO2e from aluminum and PCBs in our products.

targets for increasing the share of recycled materials in products.

Contour is implementing initiatives targeted at customers, e.g. to inform and educate customers about responsible disposal of electronics, and will continue to improve our website to further improve. We are working to enable certification of environmental claims, to help customers make informed product choices.

Contour is looking into opportunities for how to implement necessary prerequisites for handling takeback- and repair processes (e.g. ensuring available spare parts) to increase recycling and reuse and to extend the lifetime of the products. Specifically comparing internal and external capabilities.

The Sustainable Development Goals

Contour's contribution to the SDGs

INCREASING POSITIVE IMPACTS

Concrete initiatives in progress

- Proactively search for candidates of the underrepresented gender in recruitment and work to ensure that recruiting and promotion processes are unbiased
- Ensure that salaries are based purely on experience and performance
- Show and promote commitment to gender equality and diversity in communication
- Ensure appropriate handling of potential reports on discrimination

Status on initiatives

- Investigating options for third-party unconscious bias training of managers.
 Future job postings will be reviewed with regards to gender equality to avoid bias
- Examination of current pay structure to identify potential gaps related to gender is scheduled for 2022
- Focus on gender equality in marketing material and website, e.g. in selection of models for photo/video
- We are in the process of implementing a whistleblower system, expected to launch in 2022

- Conduct annual workplace conditions assessment and launch improvement initiatives
- Conduct employee survey to assess and improve employee satisfaction and well-being
- Conduct assessment of cases of absence and long-term sick leaves related to stress and mental health and launch initiatives to improve
- Ensure that all employees have access to health insurance
- Conduct annual (third-party) review and assessment of production facilities in China

- First impact assessment has been conducted in 2021 at Denmark head-office, identifying initiatives for improvement and added to action plan. Next impact assessment planned for China factory in 2022
- Investigating external partner to support development and distribution of companywide survey in 2022
- Will conduct assessment during 2022, to uncover potential long-term sick leaves related to stress and mental health. Initiatives will be determined based on findings.
- Assessment conducted in 2021, and no risks were identified. All covered by health insurance
- Due to Covid-19, third-party assessment has not been performed in China. Plan to conduct new review in 2022

MINIMIZING NEGATIVE IMPACTS

Concrete initiatives in progress

Assess potential to reduce or eliminate use of high emitting materials in production and in packaging

Sustainability Report 2021

- Review emissions from suppliers and actively work with suppliers to reduce emissions
- Share Code of Conduct for Business Relationships with all existing and new suppliers, and ensure adherence
- Ensure responsible sourcing of minerals

Status on initiatives

- First CO2e baseline calculation performed for 2020 and 2021. identifying the most high-emitting materials, enabling targeted initiatives for reduction in emissions from Scope 3.
- CO2e baseline results to be shared with suppliers in 2022, to enable dialogue and cooperation on emissions reduction
- Code of Conduct for Business Relationships developed and approved. During 2022 it will be shared with tier 1 suppliers to enable dialogue and learning
- Standard Operating Procedure to be developed and communicated to suppliers, to enable dialogue and learning. Awaiting membership with Responsible Minerals Initiative (RMI) to confirm process.

- Implement use of recycled materials in production
- Educate customers in opportunities and benefits of responsible waste handling of electronics, by clearly communicating benefits and opportunities for recycling.
- Investigate opportunities for improving repairability, to enhance product lifetime
- Work to increase percentage of recycled materials and enable certified proof of materials content. Targets to be defined.
- In addition to participating in legally required take-back schemes, we plan to further improve our website to promote responsible waste handling among our customers.
- Currently developing design and production guidelines, to align with requirements for circularity

- Disclose CO2e baseline emissions to ensure transparency across the organization
- Use results from the CO2e baseline to prioritize efforts to reduce emissions
- Reduce emissions from own operations through electrification of corporate vehicles
- Develop a climate policy

- This report includes our first CO2e report on Scope 1, 2 and 3. We will continue to improve our calculations to increase accuracy and actionability
- An emission reduction plan has been crafted across our value chain hotspots with focus on product development
- Initiatives to be defined in 2022, awaiting input to engage.
- The initiative is scheduled for 2022.

- Update and formalize structures and policies on anti-corruption and antibribery practices
- Provide training to employees to act against corruption and bribery
- Our policies on anti-corruption and antibribery are implemented in our Code of Conduct for Business Relationships.
 Whistleblower system is currently being developed and implemented with 3rd party provider.
- Currently investigating external partner to develop e-learning for employees.
