

Protect and Power Devices When Problems Occur at Home

Prevent unwanted power problems from affecting work from home productivity and **build a complete Power Protection Solution** with CyberPower® and Hypertec.

Remote workers being reliably powered and connected at home has become a crucial factor in keeping businesses operational. CyberPower have a comprehensive range of UPS Systems to **safeguard equipment against downtime, damage and data loss** caused by power problems, ensuring peace of mind for users working from home.

Provide power for equipment to safely shut down during a power outage, and **protect connected equipment from unexpected power outage** with a **Uninterruptible Power Supply (UPS)**.

Temporarily provide power to modems or routers, in the event of a power outage to insure that internet connection can be extended until utility power is restored. Allowing users the time to upload and save any critical data, **preventing mass data loss and minimising operational downtime**.

UPS System Key Features*

Energy Saving

Automatic Voltage
Regulation
